VALV-34NC 230 Vac

VN076600

Solenoid valves (with aluminium body) for normally closed gas interception. They are constructed in such a way as to guarantee gas detection both for gas detector signals (methane, LPG, carbon monoxide and others) and for mains voltage failure (black out). Manual reset can only take place in the presence of mains voltage and if the gas detector does not give any danger signals.

General features

- Normally closed manual reset gas solenoid valves that can be combined with a gas detector
- For active safety (triggered by detector command and/or loss of power)
- Threaded connections UNI-ISO 7/1
