ELETTROSONDA Q 230V AC

VE607800

Regulators for conductive liquids, designed to control the minimum and maximum level of deep wells, tanks, cisterns, etc. The operating principle is based on the controller detecting the resistance of the liquid, the level of which is controlled by means of special probes placed in the same, the longest of which acts as a common. When the level of the liquid inside the container or well reaches the three immersed probes, the relay is activated, which is deactivated only when the level drops and uncovers the low probe.

General features

- Tropicalized models
- Possibility of use in filling or emptying mode
- Allows liquid level maintenance between a minimum and a maximum threshold
- Possibility of use as maximum or minimum alarm threshold
- Fixed sensitivity
- We recommend using shielded cables for connection with the probes.

Technical specifications

Power supply	
Power supply	230 Vac
Frequency	50 / 60 Hz
Operating conditions	
Operating temperature range	-10 ÷ 50 °C
Relative humidity	20% ÷ 90% non-condensing RH
Storage temperature range	-30 ÷ 80 °C
Inputs	
Probe sensitivity	5,6 kΩ
Outputs	
Relay number	1
Relay capacity at 250 Vac	5 A
Terminations	
Termination type	Terminal blocks
Maximum cable cross-section	6 mm²
Overall dimensions	
Height (A)	90 mm
